

Discussing a Recent aHUS Diagnosis with Your Doctor

Questions You May Want to Ask

Sometimes it's hard to take in so much information, especially with a condition as serious as aHUS. That's why it's good to prepare some questions before you visit with your doctor. Below are some questions to consider asking:

- What's the most important thing I should know about aHUS?
- How would you suggest I manage my aHUS?
- What kind of management options are available?
- How often will I need to get treated?
- Will aHUS impact any of the medication(s) I currently take?
